New 2014 Product Brochures

Zeeospheres Ceramics, LLC is pleased to announce that our brand new 2014 Product Brochures are now available! This new version maintains the same layout as our previous version (2012 edition), but has a few noteworthy additions. Inside on page two of the inserts, is a Zero-VOC Anti-Corrosive Metal Primer starting formulation containing Zeeospheres. This is a 100% solids system where the Zeeospheres contributes superior corrosion resistance, added abrasion resistance, reduced resin content, and a lower viscosity. In addition to the starting formulation, a few changes have also been made to the “Zeeospheres Products” section (the very back of the brochure). As per many requests we received, the color swatches have been increased in size and the N-200PC product has been added.

Some brochures should have already been sent to all of our distributor’s offices. Please let us know if you would like an additional amount sent over. This brochure is set up to go over all the key benefits Zeeospheres can offer and is a great visual tool to leave with customers.
